

THE OMEN WARS

A mythological idle tower-defense hybrid

GAME BRIEF & BUSINESS OVERVIEW

Old Crows Wireless Solutions · Published by Mad Apps · July 2026

EXECUTIVE SUMMARY

Corvus Protocol: The Omen Wars is a mythologically-themed idle tower-defense hybrid for mobile. Players defend a summoning circle against the Pale Chorus — spectral invaders — by raising towers embodied by The Murder, a flock of anthropomorphic crow-mages, while an idle "Resonance" economy ticks in the background even while the app is closed.

The game marries the tactical, session-based satisfaction of tower defense with the compulsive, always-earning loop of idle games — a genre pairing with a proven track record on mobile. It ships free-to-play, monetized ethically through rewarded ads, a convenience subscription, cosmetics, and a premium currency, with no pay-to-win mechanics and fully disclosed gacha odds.

STATUS · JULY 2026

Playable MVP complete and hardened — all core systems built, 350k+ automated test assertions passing, zero open economy exploits, and a signed Android APK produced. Target: 60-day Android soft launch, iOS by week 8.

FIELD	DETAIL
Genre	Idle tower-defense hybrid (idle · TD · light gacha)
Platforms	Android (soft launch) → iOS (week 8)
Model	Free-to-play + rewarded ads + subscription + cosmetics
Tech	React Native / Expo · TypeScript · Zustand
Owner	Joshua Turner — Old Crows Wireless Solutions
Publisher	Houston George — Mad Apps
Status	MVP built & hardened; APK ready for device testing

STORY & WORLD

“In the shadows between code and feather, four unlikely allies stand against the Pale Chorus. Each guided by fate. Each bound by omens. Together, they are The Murder.”

THE SETTING — THE HOLLOW ROOTS

Beneath a shattered gothic cathedral, in a cavern of luminescent fungus and rune-carved standing stones, a summoning circle holds back the dead. The Pale Chorus rises in waves to smother its light. Each run is a single defense of the circle; each prestige — an “Epoch” — is the eternal recurrence of that same doomed, defiant ritual, replayed stronger. The idle engine that powers it all is the Tonal Engine, which hums Resonance even when no one is watching.

THE MURDER — YOUR TOWERS

Four playable crow-mages, each a tower archetype with an escalating per-level ability. Rosa, a fifth (pursuit / marking), waits as a post-launch unlock.

CHARACTER	ROLE	SIGNATURE
Corvus	Chaos · Crowd Control	Taunt aura + crits that chain through the flock
Sage	Warding · Support	Aura that amplifies nearby towers
Pip	Theft · Crit	Every 3rd hit chains to nearby enemies
Mira	Amplify · Execute	Multiplies nearby damage; executes the weak

THE PALE CHORUS — THE ENEMY

A spectral bestiary that escalates over fifteen waves and culminates in the boss, Whisper — who “does not walk; it arrives” — a two-phase encounter that hardens at half health.

ENEMY	ROLE	THREAT
Whisperling	Fodder	Fast, fragile — the first to break the silence
Echo Wraith	Debuffer	Its cry dulls your towers' aim
Void Shrieker	Swarm	Arrives in threes, very fast
Mourning Titan	Tank	Armored in grief — heavy damage reduction
Whisper	Boss	1000 HP · phase 2 halves damage taken, accelerates

THE CORE LOOP

A run is one defense of the circle across 15 escalating waves, capped by the Whisper boss. Between and during runs, Resonance accrues; the player spends it to raise and upgrade towers. When a run ends, progress banks — and the meta-loop of leveling, prestige, and daily engagement takes over.

- 🔍 Campaign — place towers on a stylized isometric board; enemies path to the altar. Random wave affixes (Swarm, Fog, Frenzy, Veil) keep every run fresh. 1× / 2× speed and pause.
- 🔍 Idle economy — Resonance ticks even offline, capped at 12 hours, scaled by prestige and the pass.
- 🔍 Prestige (Epochs) — reset for a permanent 1.5^{epoch} multiplier and a cosmetic unlock; premium currency never resets.
- 🔍 Progression — characters level 1–10 through play, each level strengthening its signature ability.
- 🔍 Bone-Cast — a variable-reward ritual with fully disclosed odds and a pity guarantee (a rare+ every 10 casts) — an App-Store-compliant, ethical gacha.
- 🔍 Daily Rituals — login streak, daily + weekly quests; the primary faucet for premium currency.

DESIGN PILLAR · ETHICAL BY DESIGN

Disclosed gacha odds with a stated pity rule, no pay-to-win, no loot boxes sold for cash, and a hard daily cap on rewarded ads. Monetization sells convenience and cosmetics — not power.

ART DIRECTION & AUDIO

The visual identity is painterly gothic — violet-forward, luminescent, ornate. The Murder are anthropomorphic plague-doctor crows; the Pale Chorus are spectral, teal-lit revenants. A complete art bible defines characters, enemies, towers, currencies, cosmetics and UI, all built into the app.

AUDIO

A defensive audio system drives SFX across every game event and is wired to per-character voice hooks (script complete; ElevenLabs voice recording pending). The manager degrades silently on any error, so audio can never destabilize the game.

PIPELINE

Character and enemy assets originate as concept art run through an image-to-3D pipeline (Meshy) for a consistent, ownable visual family — a repeatable process for post-launch content.

MONETIZATION

Free-to-play with four complementary revenue streams and a two-currency economy — Resonance (soft, earned) and Murder Coins (premium). Everything sold is convenience or cosmetic.

STREAM	OFFER	PRICE
Rewarded video	2×/3× offline, free retries, wave buffs	Ad revenue · 3/day cap
Convenience Pass	Remove ads · +50% offline · free retries	\$9.99 / month
Murder Coin packs	Handful / Pouch / Hoard / Murder's Ransom	\$1.99 – \$49.99
Consumables	Basic Ritual (+50% Resonance this run)	Soft currency

REWARDED-AD ECONOMICS

Target CPMs of \$2.50–3.50 on Android and \$6–8 on iOS, with an in-game cap of three rewarded views per session to protect the experience. Ads are opt-in value exchanges (double an offline claim, earn a wave buff), which historically drives high engagement without harming retention.

MARKET & MARKETING PRIORITIES

The idle and tower-defense genres each sustain large, durable mobile audiences; their hybrids (idle-TD) are a proven, monetizable niche with comparatively low creative-production cost. Corvus Protocol's differentiator is its cohesive, premium gothic art identity and an ethical, transparent economy in a category often criticized for dark patterns.

PRIORITY ORDER (RETENTION-FIRST)

- 1 · Onboarding & D1 retention. The single highest-leverage metric. A guided first run ships in the MVP; iterate relentlessly on the first session before spending on acquisition.
- 2 · Store presence (ASO). Icon, screenshots and a 15–30s trailer that lead with the painterly crows and the "defend + idle-earn" hook. The art is the marketing.
- 3 · Creative for paid UA. Short-form video (TikTok / Reels / YouTube Shorts) showing a satisfying wave clear + an idle-reward payoff; the visual style is inherently thumb-stopping.
- 4 · Community & influencers. Idle/TD and "cozy-but-dark" creators; a Discord for the soft-launch cohort to gather balance and retention feedback.
- 5 · Live-ops cadence. Daily Rituals, weekly rites, and seasonal cosmetics via the existing Bone-Cast and pass systems to sustain D7/D30.

POSITIONING

"A hauntingly beautiful idle tower-defense — raise a murder of crow-mages, hold the circle against the dead, and keep earning even when you set it down." Ethical economy, no pay-to-win, art you'll screenshot.

PROJECTED PERFORMANCE

The soft-launch plan targets a small, measurable cohort to validate retention and monetization before scaling user acquisition. Targets below are the plan of record; they are conservative and intended to de-risk spend, not to forecast a hit.

METRIC	MONTH 1 TARGET	MONTH 3 TARGET
Installs	1,000+	1,200+ (organic-led)
D1 retention	35%	35%
D7 retention	15%	18%
D30 retention	8%	10%
Avg. session	8 min	12 min
Ad watch rate	20%	25%
Subscription rate	1%	2%
Revenue	\$1,200	\$6,700

HOW THE REVENUE LADDERS

Month-1 revenue is dominated by ad views and a thin layer of early subscribers and pack purchases on a ~1,000-install base. The 5–6× jump to Month 3 comes not from more installs but from compounding retention and improving monetization — higher D7/D30 keep more daily-active users watching ads and converting, session length rises, and the subscription rate doubles as the value of the pass becomes clear. This is the standard idle-game curve: the meta-loop deepens engagement over weeks.

SCALE SCENARIO (ILLUSTRATIVE, NOT A TARGET)

The soft-launch targets validate unit economics on ~1k installs. If D7 holds above ~15% and blended ARPDAU lands in the typical idle-hybrid range, the same systems scale roughly linearly with paid UA — i.e. a 10× install base at stable retention implies a proportional revenue lift. Actual scale-up depends on CPI vs. LTV, which the soft launch exists to measure.

Figures are internal targets from the project plan, presented for planning purposes; they are not guarantees. The soft launch is explicitly designed to measure and correct these assumptions before meaningful acquisition spend.

DEVELOPMENT STATUS & ROADMAP

BUILT & VERIFIED

- ☑ All 14 designed screens, native; full navigation and persistence.
- ☑ Playable real-time campaign — pathing, tower AI, damage model, 15 waves, two-phase Whisper boss, affixes.
- ☑ Full economy — Resonance + Murder Coins, prestige, 12h offline income, Bone-Cast (disclosed odds + pity), Daily Rituals.
- ☑ Character progression wired into combat; first-run onboarding tutorial.
- ☑ Complete game-bible art integrated; SFX + voice-hook audio system.
- ☑ Hardened — 350k+ stress assertions, 0 open economy exploits, balance tuned; signed Android APK produced.

NEXT TO SHIP (TO SOFT LAUNCH)

- ☑ Live ad SDK (Google Mobile Ads) + Play Billing into the existing capped reward and store hooks.
- ☑ ElevenLabs voice recording dropped into the ready audio pipeline.
- ☑ Backend for accounts, cross-device sync and analytics (Firebase) — to instrument the KPIs above.
- ☑ Device QA across target Androids, store listing + creative, then production build.
